ABOUT

Artificial Intelligence and Data Science student and software engineer skilled in Python, Java, and TypeScript, building scalable full-stack and intelligent systems. Experienced in backend development with FastAPI, Flask, and Node.js, and mobile development with Flutter. Possess working knowledge of Large Language Models (LLMs) and Machine Learning.

EDUCATION

Smt. Indira Gandhi College of Engineering (2025 – 2028)
B.Tech, Artificial Intelligence & Data Science | GPA: 8.95

Saraswati Institute of Technology, Kharghar (2022 – 2025)
Diploma in Information Technology | 87.87%

SKILLS

- **Languages:** Java, Python, TypeScript, Dart
- **Backend & Frameworks:** Node.js, FastAPI, Flask
- **Frontend & Mobile:** Flutter, React
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Tools & Platforms:** Git, GitHub, Docker, WebSockets

PROJECTS

GigBit / *Flutter, Node.js, TypeScript, PostgreSQL, Redis* / GitHub

- Built a full-stack fintech platform for gig workers enabling instant withdrawals, loan and insurance requests, and real-time payout visibility through a Flutter mobile app and web admin portals.
- Developed a modular backend API with PostgreSQL and Redis to manage transactional workflows, approval pipelines, and synchronized operations between worker apps and admin systems.

GeoWatch / *Flutter, React, FastAPI, PostgreSQL, WebSockets* / GitHub

- Implemented a real-time distributed system that processes GPS-based incident data and detects geospatial risk clusters using DBSCAN during large public events.
- Engineered a scalable FastAPI backend with WebSocket-based real-time updates powering a live monitoring dashboard. Worked with a team of four developers across mobile, backend, and frontend modules.

AASHA / *React (PWA), Flask, PostgreSQL, IndexedDB* / GitHub

- Architected an offline-first healthcare platform that structures patient health data from voice and text inputs and flags high-risk patient cases using rule-based analytics.
- Built secure REST APIs using Flask and automated data synchronization. Contributed to a development team building scalable healthcare monitoring solutions.

GitGo / *TypeScript, Node.js, VS Code Extension API, Git* / GitHub

- Created a VS Code extension that automates publishing coding solutions to GitHub by generating project folders, documentation, and executing Git workflows with a single command.
- Designed a modular pipeline system integrating file processing, README generation, and Git automation to streamline developer publishing workflows.

ACHIEVEMENTS & ACTIVITIES

- **Fintech Domain Winner** — Project Morpheus 2026 Hackathon. Credential
- Co-founded RuntimeSync, a collaborative GitHub organization for open-source development and team workflows.

CERTIFICATIONS

- AI Agents Intensive Course with Google — Kaggle x Google (2025) Credential
- Data Analytics Virtual Job Simulation — Deloitte Australia (Forage) (2025) Credential
